Transform Your Factory Operations with Easy-to-Deploy Manufacturing Apps

Get real-time visibility into factory operations to proactively resolve issues and drive factory performance.

Manufacturers are under constant pressure to minimize downtime, improve quality, and respond faster to individual customer requirements, whilst at the same time lowering costs. PTC's newly released ThingWorx Manufacturing Apps provide the solution.

Thingworx Apps can be installed in less than 60 minutes without disrupting production. These apps provide manufacturers with real-time visibility into factory floor operations, so they can reduce downtime, and improve quality, productivity, and flexibility.

ThingWorx Manufacturing Apps consists of four role-based apps:

- Controls Advisor
- Production Advisor
- Asset Advisor
- Operator Advisor

These user-friendly apps were built to overcome the unique challenges of different job roles across the factory.

- Role-based starter apps for Control Engineers, Plant Managers, and Maintenance Professionals that connect disparate factory devices and machines.

- Improve real-time visibility into production status, data connectivity, maintenance issues, operational efficiency, product quality, and other critical performance indicators.

- Fully web-enabled and accessible via any browser - so you and your team members can monitor, analyze, and act on operational data in real time.

- Built on ThingWorx, the industry-leading IoT platform from PTC, these apps provide the right information to the right person, at the right time - enabling collaborative, data-driven decision making across the factory, without data overload.
